

SECA 222

Specially developed for wall mounting, this measuring rod is aligned to work exactly to the millimetre from head to toe. Its broad measuring slide and heel positioner are professional prerequisites.

The telescopic measuring rod ensures that the result can be easily read-off: at eye level even for the tallest patient. When not in use, the measuring slide can be folded down for safety.

SECA 214

The seca stadiometer is particularly suitable for mobile use, e.g. for measuring children and teenagers in the course of medical examinations at schools. The measuring rod which can be dismantled into several pieces is easy to transport and can be set up anywhere in no time at all. A stable floor plate provides the necessary stability and the easy to read scale along both sides of the measuring rod means that the height can be read easily.

SECA 242

This battery-powered height measuring device (for wall mounting) determines the height via an opto-sensor and transmits wirelessly, from the measuring unit to a separate, easy to read LCD so that the result can be read-off at any location. The measuring slide is easy to locate due to the large head piece, and the feet are accurately placed using the heel positioner.
